bathymetry represented
mean lower low tide
Charlestown UAV Program

Bathymetric Data - May 19, 2026 (mean lower low water)

The information presented on this map is intended for general guidance only. Boaters are advised that channel conditions, depths, and navigable routes may change rapidly due to tidal surge, weather conditions, and storm activity. Shifting sands, and altered seabed topography may render marked channels inaccurate.

This chart does not replace prudent seamanship. Users assume all risk and responsibility for navigation decisions made based on this chart.
